To whom it may concern,

I am Robert Rhames, Technologist Support Supervisor for Chevron GOMBU Deepwater Operations and would like to give a recommendation for Timothy Calhoun.

Tim worked in our group for over seven years and was a consistent outstanding performer, meeting the needs of the business unit and individual requests as needed. Some of his duties included monthly scorecard for performance on each of our drill ships, updating the cost planning module used to predict costs for our wells, modifying as needed performance reporting for each of the Technologists supporting our rigs for management reports.

In addition, he was requested to pull data from our source of record, WellView, by various engineers for their respective projects. Tim was the creator of the Well Monitoring Tool using excel with macros, v-lookups and visual basic logic that we use to track performance by days/costs/trouble events/responsible party. Due to his efforts, it helped reduce the time each Technologist spends to about 25% of previous tools used.

I found that Tim, given the right information, takes ownership of a project and follows through to completion. He asks all the right questions and ensures he gives the right product when completed. He offers suggestions that he feels would make a better product.

His logic and reasoning were admired by all levels within our group. It proved very helpful in writing our WellView Operations Guide and helped us to keep language and thought processes simple, clear and concise.

As a member of our team he was very well thought of by each member and they had the confidence to go to him for help and knew they got the right results. He has a great attitude, fun to work with by having a quick wit and brought fun to the table.

I very much regretted the day Tim left, but fully understood his position to go and pursue other goals in his life. I know he will do well in whatever he wants to do and for those that are working around him will find him a great team player.

If further information is needed, do not hesitate to inquire.

Thanks for the opportunity,

Robert Rhames

Chevron Technologist Support Supervisor
